

We are constantly challenging the status quo. We create jewelry stores that are beautifully designed, simple to operate and customer friendly. The stores we design are well lit – they highlight the jewelry and save our clients money because they are energy efficient. GRID/3 designs great projects.

Mark Yelton of Yelton Fine Jewelry in West Chester, Ohio entrusted us with the design, inside and out, of the 7500 square foot building he purchased, which was originally a restaurant. As part of our design, we specified Con-Tec lighting – reasonably priced, handsome lighting that uses energy efficient lamps.

Good move – this won Yelton Fine Jewelry and GRID/3 International, Inc. the “Best of Show” in the Retail Design division of Con-Tech’s annual lighting competition.
